

## E9 STRAND GUIDE FOR EL900E-SERIES NOZZLE MODULE

You have a possibility to upgrade your EL900E-series nozzle module by replacing the strand guide with a newer E9-series strand guide.

### Advantages

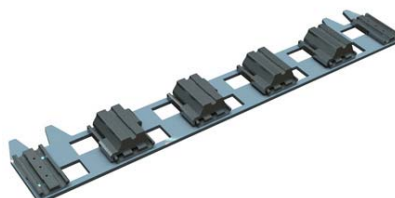

Newer strand guide model brings e.g. following advantages:

Strand configuration can easily be changed by changing the guide plate. This means that also e.g. the adaption of new strand configurations according to the EN1168 standard is easy.

Placing of the strands is more accurate because the guiding surfaces are longer than in the previous model.

The new E9 strand guide has better durability due to the more wear resistant material.

The new model has a new, completely mechanical construction (no hydraulics). The new construction also means that the strand guide is easier to install when there is large number of strands.

### Further information

Please contact Elematic Customer Service to receive more detailed information about upgrading your EL900E-series nozzle module.

Our contact information are:

Tel. +358 3 549 511

## EXTRUDER E9

### 4th generation Elematic extruder

- Cross-sections available from 160 mm to 500 mm.
- A wide range of standard, heavier and lighter slab cross-sections
- Improved compaction with inverter use
- Remarkable accuracy of slab dimensions
- Excellent flatness of top surface
- Advanced user-friendly control system
- High wear resistance with the most wear-resistant materials in the main wear parts
- Minimized downtime through swift change from one slab size to another, optimized preventive maintenance scheduling and online troubleshooting possibility with WLAN connection.
